

H-GAC:

The Memorial City District strongly supports for federal funding the proposed priority rebuilding of Memorial Drive from Kirkwood to Eldridge proposed by the City of Houston.

Memorial Drive bisects major activity centers and is a major east/west reliever for the Katy Freeway. The project will improve traffic congestion in the West Houston, Memorial City, and Energy Corridor areas. It is a long needed improvement as the adjacent residential and commercial community have completely outgrown the original rural design of the facility.

The Memorial City District has contributed toward the West Houston Sub Regional Transportation Study along with other management districts. The Study and this Memorial Drive Project exemplifies the needed improvements in our sub region.

Our District supports a better living and working environment for the 1.5 million residents and 500,000 employees in Greater West Houston. Memorial City District stakeholders are property owners, major employers and related interests who advocate for improved mobility, better infrastructure and a sustainable quality of living environment for our District and the region. Please move forward with this project.

Sincerely,

Pat Walters

Executive Director

Memorial City District
